

• NAIKE-CaX

Description

CaX is an alkali metal aluminosilicate whose crystal is a calcium X-type structure. The molecular sieve can adsorb molecules with a critical diameter of 9A. It is a special molecular sieve for pressure swing adsorption and oxygen production.

specification

Item	Unit	CaX	
Shape		Sphere (granular)	
Diameter	mm	Φ1.2~1.8	Φ1.6~2.5
Bulk Density	kg/L	0.62~0.68	0.62~0.68
Crushing strength	N/Pellet	≥12	≥18
Abrasion ratio	%wt	≤0.3	
Static N ₂ absorption	ml/g	≥22.0	
N ₂ /O ₂ separation coefficient		≥4.1	
Static water absorption	%wt	≥28.0	
Water content	%wt	≤1.0	
Absorption pressure for oxygen produc	KP	50	
Desorption pressure	KP	-50	
Outlet oxygen concentration	%	93	
Oxygen production capacity	/ton Molecular sieve	45m ³	

Attention: CaX can't be exposed in the open air and should be stored in dry condition with air-proof package. It can be regenerated after a certain period of adsorption. The appropriate regenerated temperature would be better below 350°C.

Main application

It mainly used for oxygen producing in air separation of pressure swing adsorption.
